TOSHIBA

Model name:

BMS-IFMB0UEW-E
MB Interface

Modbus RTU (RS-485) Interface
for Toshiba AIR TO WATER HEAT PUMP

User Manual
Issue Date: 31/05/2021

English

1. Presentation

The BMS-IFMB0UEW-E interface allows a complete and natural integration of Toshiba Air to Water heat pump into Modbus RTU (RS-485) networks.

The BMS-IFMB0UEW-E is compatible with the Toshiba ESTIA AW-LINK and TU2C-LINK lines.

• Reduced dimensions. 90(93) x 53 x 58 mm.
• Quick and easy installation.
  Mountable on DIN rail, wall
• External power not required.
• Direct connection to Modbus RTU (RS-485) networks.
  BMS-IFMB0UEW-E is a Modbus slave device.
• Direct connection to the Hydro unit.
• Configuration from both on-board DIP-switches and Modbus RTU.
• Total Control and Supervision.
• Real states of the Hydro unit's internal variables.
• Allows using simultaneously the Remote Controller and Modbus RTU.
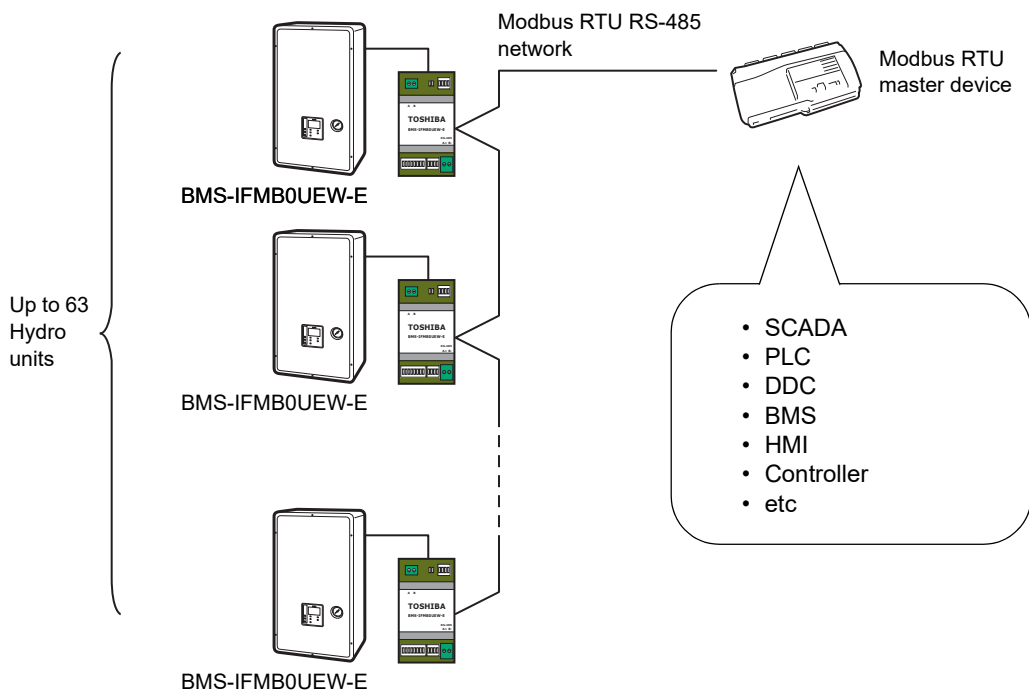

2. Connection

The interface comes with two plug-in terminal blocks of 2 poles for connection to a Modbus RTU RS-485 network and to the Toshiba ESTIA AW-LINK for ESTIA 4 series and 5 series (AW-LINK), or Toshiba TU2C-LINK for R32 1 series (TU2C-LINK).
2.1 Connect to the Hydro unit

To connect the BMS-IFMB0UEW-E interface to the Hydro unit follow these steps:

Disconnect mains power from the Hydro unit. Open the front cover of the Hydro unit in order to have access to the electronic circuit. In the electronic circuit locate the socket connector marked as AB[1].

Using a cable connect the interface to AW-LINK or TU2C-LINK in any point of the bus. AW-LINK and TU2C-LINK are the bus that connects the Hydro unit and the wired remote controller, is a two-wire bus connecting terminals AB of both and has no specific polarity. Respect the maximum distance of 50 m for the bus length.

Caution

When using the BMS-IFMB0UEW-E, only one remote controller (Header) is connected to the AB bus. The sub-remote controller cannot be connected.

2.2 Connection to the RS-485 bus

Connect the RS-485 bus wires to the plug-in terminal block (the one of two poles) of BMS-IFMB0UEW-E, respect the polarity on this connection (A+ and B-). Respect the maximum distance of 500 meters for the bus, no loop or star topologies are allowed for RS-485 bus, a terminator resistor of 120 Ω must be present at each end of the bus to avoid signal reflections and also a fail-safe biasing mechanism (see section 3.6 for more details).

---

1. In some models, the AB connector is not present. Find the Remote Controller bus and connect the cable coming from the gateway into these cables as if they were the AB connector.

3. Modbus Interface Specification

3.1 Modbus physical layer

BMS-IFMB0UEW-E implements a Modbus RTU (slave) interface, to be connected to an RS-485 line. It performs 8N2 (8N1-compatible) communication (8 data bits, no parity and 2 stop bit) with several available baud rates (2400bps, 4800bps, 9600bps -default-, 19200bps).

The relationship between the start address specified in a request from the master device and the value shown by "Modbus-address for registers" in the address assignment table is as follows:

For Holding Register
Start address = (Value of Modbus-address for registers) – 40001

3.2 Modbus Registers for Standard Functions

All registers are of type "16-bit signed Holding Register", in standard Modbus' big endian notation.

3.2.1 Hydro Unit Control and Status Registers

Modbus Register	R/W	Item		R32 1 Series	5 Series	4 Series
40001	R/W	Zone1/2 ON/OFF setting/monitor	0 : OFF 1 : ON	✓	✓	✓

Precaution

When the temperature setting is made for Zones 1/2 from the BMS-IFMB0UEW-E, the actual water temperature may be lower than the set temperature depending on the FC/DN setting of the remote controller.

3.3 DIP-switch Configuration Interface

All configuration values on BMS-IFMB0UEW-E can be written and read from Modbus interface. Though, some of them can also be setup from its on-board DIP-switch interface.

They are DIP-switches S1*, S3* and S4 on the device, in the following location:

S1
ON 1 2 3 4

Hydro unit type selection. It is recommended not to change the default value unless you are sure about the Hydro unit type you own.

L1 (green)
L2 (red)

Normal operation: At device start-up, both LEDs are on during 5 seconds. Afterwards only the green LED remains flashing (1900ms Off/100ms On). For any other indication, consult the User Manual.

Modbus slave address and Baudrate configuration.

ON 1 2 3 4 5 6 7 8   ON 1 2 3 4

S3   **S4**

Configuration degrees/decidegrees (x10), temperature magnitude (ºC) and RS-485 termination resistor.

The following table applies for configuration of the interface through these DIP-switches:

S1 - Hydro unit type

Switches 1 2 3 4	Description
↓ ↓ x x	Estia Hydro unit 5 series
↑ ↓ x x	Estia Hydro unit 4 series
↓ ↑ x x	Reserve.
↑ ↑ x x	Estia Hydro unit R32 1 series (WM and AIO type), (default)

Table 3.1 Hydro Unit Type

S3 - Modbus protocol: Slave address and baudrate

Switches 1 2 3 4 5 6 7 8	Description
x x x x x x ↓ ↓	2400bps
x x x x x x ↑ ↓	4800bps
x x x x x x ↓ ↑	9600bps (- default value)
x x x x x x ↑ ↑	19200bps

* Default value

Table 3.3 Modbus Slave address

S4 - Other: Degrees/Decidegress (x10), temperature magnitude (ºC/ºF) and RS-485 termination resistor

Switches 1 2 3 4	Description
↓ x x x	Temperature values in Modbus register are represented in degrees (x1) (default value)
↑ x x x	Temperature values in Modbus register are represented in decidegrees (x10)
x ↓ x x	Temperature values in Modbus register are represented in Celsius degrees (default value)
x ↑ x x	Temperature values in Modbus register are represented in Fahrenheit degrees
x x x ↓	RS-485 bus without termination resistor (default value)
x x x ↑	Internal termination resistor of 120Ω connected to RS-485 bus*

* Only in the interfaces connected at both ends of the bus must be activated the termination resistor. More information in section 3.6

Table 3.4 Temperature and termination configuration

3.4 Implemented Functions

BMS-IFMB0UEW-E implements the following standard Modbus functions:
• 3: Read Holding Registers
• 6: Write Single Register
• 16: Write Multiple Registers (Although this function is allowed, the interface does not allow write operations on more than 1 register with the same request, this means that length field should always be 1 when using this function for writes)

3.5 Device LED indicator

The device includes two LED indicators to signal its different possible operational states. In this section their meaning is explained

L1 (yellow)			
Operation	**ON**	**OFF**	**Meaning**
Blinking	500 ms	500 ms	Communication error
Flashing	100 ms	1900 ms	Normal operation (configured and working)
L1 (green) & L2 (red)			
Operation	**ON**	**OFF**	**Meaning**
Pulse	5 sec	--	Device start-up
Alternate blinking	500 ms	500 ms	EEPROM failure

3.6 RS-485 bus. Termination resistors and Fail Safe Biasing mechanism

RS-485 bus requires a 120Ω terminator resistor at each end of the bus to avoid signal reflections.

In order to prevent fail status detections by the receivers "listening" the bus when all the transmitters outputs are in three-state (high impedance), it is also required a fail-safe biasing mechanism. This mechanism provides a safe status (a correct voltage level) in the bus when all the transmitters' outputs are in three-state.

The BMS-IFMB0UEW-E device includes an on-board terminator resistor of 120Ω that can be connected to the RS-485 bus by using DIP-switch S4 Bit4, ON : 120Ω, OFF : without terminal register.

Fail safe biasing of the RS-485 bus must only be supplied by one of the devices connected to the bus. The device providing fail safe biasing or terminator resistor should be the one connected at one end of the bus. At the other end of the bus, if there is also a BMS-IFMB0UEW-E device, select the 120Ω terminator resistor through DIP-switch P5, or if there is a master device not providing internal 120Ω terminator resistor, connect an external 120Ω resistor in the bus terminal block connection of such master device.

Some Modbus RTU RS-485 master devices can provide also internal 120Ω terminator resistor and/or fail safe biasing (consult the technical documentation of the master device connected to the RS-485 network in every case).

4. Specifications

Dimensions:	90(93) x 53 x 58 mm
Weight:	85 g
Operating Temperature:	0 . . . 40ºC
Stock Temperature:	0 . . . 40ºC
Operating Humidity:	<95% RH, non-condensing
Stock Humidity:	<95% RH, non-condensing
Isolation voltage:	1500 VDC
Isolation resistance:	1000 MΩ
Modbus Media:	Compatible with Modbus RTU – RS-485 networks
5. Supported ESTIA Unit Types

The BMS-IFMB0UEW-E supports the R410A 4-Series (WM type), R410A 5-Series (WM type), and R32 1 Series (WM and AIO type) ESTIA Hydro Units.

6. Check Code

Check code		Alarm Unit	Alarm Description
Hexadecimal Number	Remote Controller Display		
0000	N/A	I/F	
0001	A01	Hydro Unit	Pump or flowing quantity error
0002	A02	Hydro Unit	Temperature increase error (Heating)
0003	A03	Hydro Unit	Temperature increase error (Hot Water Supply)
0004	A04	Hydro Unit	Antifreeze operation (1)
0005	A05	Hydro Unit	Piping antifreeze operation
0007	A07	Hydro Unit	Pressure switch operation
0008	A08	Hydro Unit	Low pressure sensor operation error
0009	A09	Hydro Unit	Overheat protection operation
000A	A10	Hydro Unit	Antifreeze operation (2)
000B	A11	Hydro Unit	Operation of the release protection
000C	A12	Hydro Unit	Heating, hot water heater
000D	A13	Hydro Unit	Pump error (Mainly low voltage to the system)
000E	A14	Hydro Unit	Pump error (Mainly except low voltage to the system)
000F	A15	Hydro Unit	Pump error (for zone2)
0041	E01	Remote Controller	No communication between hydro unit and remote controller
0042	E02	Remote Controller	Defect in the signal transmission to the hydro unit.
0043	E03	Hydro Unit	Regular communication error between hydro unit and remote controller
0044	E04	Hydro Unit	Regular communication error between hydro unit and outdoor unit
0048	E08	Hydro Unit	Duplicate address of Hydro unit, or Duplicate master Hydro unit during Group control
0049	E09	Remote Controller	Several remote controller base units
004E	E14	Hydro Unit	Regular communication error between hydro unit and 0-10 V-IF
0052	E18	Hydro Unit	Regular communication error between master Hydro unit and slave Hydro unit during Group control
0063	F03	Hydro Unit	TC sensor error
0064	F04	Outdoor Unit	TD sensor error
0066	F06	Outdoor Unit	TE sensor error
0067	F07	Outdoor Unit	TL sensor error
0068	F08	Outdoor Unit	TO sensor error
006A	F10	Hydro Unit	TWI sensor error
006B	F11	Hydro Unit	TWO sensor error
006C	F12	Outdoor Unit	TS sensor error
006D	F13	Outdoor Unit	TH sensor error
006E	F14	Hydro Unit	TTW sensor error
006F	F15	Outdoor Unit	TE, TS sensors error
0071	F17	Hydro Unit	TFI sensor error
0072	F18	Hydro Unit	THO sensor error
0073	F19	Hydro Unit	Detection of THO disconnection error

Check code		Alarm Unit	Alarm Description
Hexadecimal Number	**Remote Controller Display**		
0074	F20	Hydro Unit	TFI sensor error
0077	F23	Hydro Unit	Low pressure sensor error
0078	F24	Outdoor Unit	PD sensor error
007D	F29	Hydro Unit	EEROM error
007E	F30	Hydro Unit	Extended IC error
007F	F31	Outdoor Unit	EEPROM error
0160	F32	Hydro Unit	Flow sensor error
0161	F33	Hydro Unit	Flowing quantity error
0081	H01	Outdoor Unit	Compressor
0082	H02	Outdoor Unit	Compressor lock
0083	H03	Outdoor Unit	Defect in the current detection circuit
0084	H04	Outdoor Unit	Operation of case thermostat
00C2	L02	Hydro Unit	Combination
00C3	L03	Hydro Unit	Duplicate main Hydro unit during Group control
00C7	L07	Hydro Unit	Communication error
00C8	L08	Hydro Unit	Hydro Unit group / Address unset
00C9	L09	Hydro Unit	Communication error
00CA	L10	Outdoor Unit	Unset service PC board jumper
00CF	L15	Outdoor Unit	Combination error
00D0	L16	Hydro Unit	Setting error
00D6	L22	Hydro Unit	0-10V Setting error
00DD	L29	Outdoor Unit	The communication between the outdoor PC board MCUs error
00E3	P03	Outdoor Unit	The outlet temperature error
00E4	P04	Outdoor Unit	The high pressure switch error
00E5	P05	Outdoor Unit	The power supply voltage error
00E7	P07	Outdoor Unit	Overheating of heat-sink error
00EF	P15	Outdoor Unit	Detection of gas leak
00F3	P19	Outdoor Unit	The 4-way valve inversion error
00F4	P20	Outdoor Unit	High pressure protection operation
00F6	P22	Outdoor Unit	Outdoor fan system
00FA	P26	Outdoor Unit	Short circuit of the compressor driver element error
00FD	P29	Outdoor Unit	Compressor rotor position error
00FF	P31	Hydro Unit	Slave Hydro unit error which occurs when error occurs in master Hydro unit
FFFF(-1)	-	I/F	Error in the communication of BMS-IFMB0UEW-E device with the Hydro unit
